LANGIUM

<u>Eclipse Langium</u> [language and equilibrium] is an open source language engineering tool with built-in support for the Language Server Protocol (see blogs - <u>LSP Magic</u>, and <u>DAP Magic</u>, <u>ANTLR4 Magic</u>), written in TypeScript and running in Node.js, powered by <u>Chevrotain</u> (very fast and feature rich JS **LL(k)** Parsing DSL).

Main reason not to adopt ANTL4 is JAVA on JS environment.

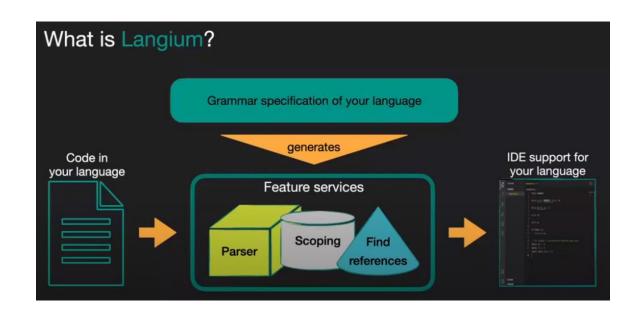

Langium is a future-proof technology stack enables DSLs in VS Code, Eclipse Theia, web applications (on <u>browser</u>), and more.

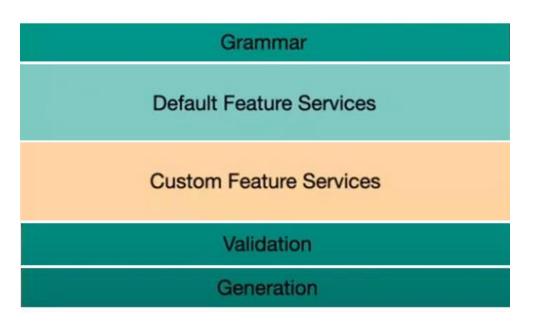

Langium features a command line interface (<u>langium-cli</u>) that reads a grammar declaration and generates TypeScript type declarations for the AST and more.

Integration with the Language Server Protocol (LSP) is done with vscode-languageserver.

Xtext&Xtend vs LANGIUM

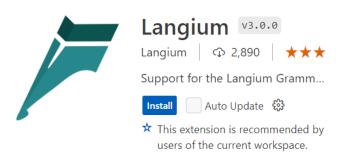

Xtext /Xtend	LANGIUM
Xtext is built upon Eclipse and ANTLR - Java technology stack.	Langium is built upon Visual Code (+ Eclipse Theia) and Chevrotain.
Building a tool that uses an Xtext-based language server with VS Code or Theia means creating a hybrid technology stack Java [e.g. lang-server] and others in TypeScript [e.g. lang-client].	It enables language engineering in TypeScript , Vite/Vistes, and other Node.js libraries - same technology stack Langium wants to keep the concepts that have made Xtext successful, but lift them onto another platform
 GLSP, or CCF Broadcom can be adjusted for PL/1 Java, Eclipse, Xtext, EMF, Maven, Gradle, Tycho, Xtend biggest attraction of XText, it is deep integration with XTend for code generation LSP4J is a reference implementation of LSP for Java 	 Langium meets <u>Sprotty</u>: combining text and diagrams in VS Code Node.js, VSCode, Typescript, Vite, relying on a mixture of <u>TypeScripts template strings</u> and our own generator utility LSP is designed for Typescript, so VSCode has build in support already

Define Grammar – Just define the syntax of defined language, all other artifacts are generated automatically IDE support – highlighting, scoping, code completion, find references, validation, ...
